

	<b>Pump Manufacturers</b>	<b>System Designers and Specifiers</b>	<b>System Suppliers and Installers</b>	<b>Pump Users</b>
<b>All Product Types</b>	Energy efficiency training material in modular format for designers, specifiers, suppliers and installers of pumping equipment.			Purchasers and operators are trained on energy efficiency and life cycle cost considerations. -
	Common format for efficiency information (system and component) to be presented on all tenders for work.			
	Best Practice design and guides for the supply and installation of pump systems with variations if required for low cost medium and bespoke products.			Purchasers are able to interpret energy related bid material presented at time of purchase and use procurement guides
	Expert pump selection tools.	Adopt and use pump selection tools.		
	Tools to estimate system efficiency.	Adopt and use tools to estimate system efficiency.		
System auditing tools to verify new build and existing installation continued efficiency			Procedures in place to ensure regular monitoring / auditing of systems is implemented.	
<b>Low cost product market</b>	Common format for product efficiency information to be presented on the product, E.g. labelling schemes for small pumps, such as the Europump circulator labelling scheme.		'System' data sheet to be left on site which details efficiency aspects of the system.	
<b>Medium cost and bespoke product market</b>	Common format for product efficiency information to be presented in the pump quotation E.g. data sheets focused on efficiency & LCC aspects.for bespoke units	Common format for efficiency information (system and component) to be presented on all tenders for work.		
			Recognised procedures to measure actual system efficiency.	
			Commission system, measure efficiency and leave commissioning data sheet on site.
